

Dust Control

DUST MOP CHOICES

Why Dust Mopping Is Critical

Simply stated, "Dust Control is Damage Control". A consistent dust control program will be an effective preventive maintenance program against many problems including floor damage and carpet deterioration. Dust mopping will enhance the facility image, promote overall cleanliness, lessen the need for floor scrubbing due to abrasive dirt and dust, and reduce airborne particulates. A proper dust mop program will save you time and labor costs.

Selecting the Right Dust Mop for the Right Application

Dust mops are composed of cotton, synthetic, or blended material. Cotton is the most economical and is excellent at collection and retention. Cotton comes in cut-end styles and closed-end. The cut-end cotton deteriorates quickly and tends to lint and fray. Cotton mops require dust treatment and laundering. Closed-end mops reduce linting and withstand laundering much better.

Synthetic fiber dust mops pick up dust by static attraction and treatment. These mops are quick drying and can withstand laundering much better than cotton. Synthetic and blended mops are the professional's choice.

Other Factors to Consider

Pre-Shrunk Backings - Standard for professional dust mops to increase life and performance.

Antimicrobial - This treatment is excellent for health care applications.

Frames and Handles - Frames should be rust resistant and handles should be swivel-snap construction.

Special Applications - Prior to applying finish or other critical applications, consider using microfiber cloths that do not leave any slippery or sticky residue for better finish application and adherence.

Dust Mop Treatments

Hillyard Super Hil-Tone and Hil-Mist dust mop treatments are easy to apply - just remember to always treat your dust mops the night before they're to be used. For **new or freshly laundered mops**, determine the length of the dust mop (in feet), and apply two ounces of Super Hil-Tone or Hil-Mist per foot for the initial treatment. For example, a three-foot dust mop would require six ounces for the first treatment. For **retreating dust mops**, apply one ounce of dust mop treatment per foot. In other words, for retreating a three foot dust mop, it would only take three ounces of Super Hil-Tone or Hil-Mist.

Dust Control

ITEM	DESCRIPTION	PACK
------	-------------	------

A. PRO-LINE LOOP COTTON DUST MOPS

Four bottom rows of yarn hold more dust and soil. Pre-treated to enhance performance. Pre-laundered, ready to use and launderable.
