

## Lafayette High School — Daily Restroom Cleaning Simplified

Lafayette High School, St. Joseph, MO, changed from cleaning restrooms the traditional way, with a lot of wiping, scrubbing and mopping, to cleaning the next generation touch-free way with the Hillyard C2™ Cleaning Companion.

“I wasn’t sure if my staff would use the C2 for everyday cleaning, but when they tried it, they loved it,” said Roger Wagers, Buildings and Grounds director, St. Joseph School District.

From the initial in-service, the staff used the C2 for routine, everyday restroom cleaning. School custodian, Mike Przybylski said it best, “Not only is it faster and easier, the restrooms are cleaner too.”

Lafayette was like many schools when it came to restroom cleaning. Mike said, “We’ve been cleaning restrooms the same way for years, good old-fashioned elbow grease. Sure, we can get a restroom clean, but it takes a lot of hard work, effort, and time. We’re not afraid of hard work but, when you’re being asked to do more and more, it’s hard to find the time to do everything.”

Mike added, “It’s good that Roger is always searching for better ways to do things.”

### Finding a better way

Roger said, “In the past, we looked at touch-free cleaning methods, and quite frankly, the capital cost was too high. Additionally, we felt the systems were just too big and bulky. We didn’t think our custodians would take the time to set up all the cords and hoses, and then, rinse the vacuum tank out afterwards. If equipment is not easy to use, it winds up in the closet — money wasted. The Hillyard C2 is different.”

### What makes the Hillyard C2 Cleaning Companion right?

■ **Battery Operated** — The C2 has a continuous run-time of up to 1.5 hours on a single charge. Generally, that’s enough time to clean five to six sets of large restrooms. And, no more wasted-time trying to find a working outlet.

■ **Compact** — The C2 goes right into the restroom. And, 12 feet of supply hose offers enough freedom to get the job done. At the same time, cleaning solution clears the hose quickly when switching from application to rinse mode.

■ **Efficient Flow Rate** — The C2 has a .5-gallon per minute flow rate. Applying the right amount of solution eliminates over-saturation and waste. The C2’s water and solution-saving design is environmentally preferred over systems with higher flow rates. And, the 14-gallon water capacity gives the C2 28 minutes of run-time before having to stop and refill.

■ **Vac-Free** — The efficient flow rate means less moisture on the floors. Sim-

ply squeegee remaining solution to the drain — no vac required. No vac means no vac noise. Custodians can operate the quiet C2 24/7, without interrupting building occupants. That’s a big plus, especially in facilities that are cleaned during the day.

■ **Exceptional Value** — The C2’s intelligent design makes it less than half the price of older, first generation touch-free cleaning systems.

Roger said, “The bottom-line is the C2 allows us to clean restrooms faster and better than before. My staff uses it daily. And, the price allows a manager to place multiple C2’s throughout a facility.” □
